

Transition to Sustainability

Continuity, Improvement, Flexibility

Address Long Term Factors

Emphasize Prevention
Empower Women and Girls
Build Workforce Capacity
Expand Knowledge Base

Better Harmonize

Improve Coordination
Support WHO Prequalification
Remove Budget Allocations

Expand, Improve, Integrate Services

Data-Driven Prevention
Adequate Medications for Treatment
Community-based, Family-centered Care
Performance Target for Orphans & Vulnerable Children
Attention to Marginalized Populations

Evaluation in the Long-Term

Shift the foci and types of measures:

- From measures of spending (inputs) to **measures of results** (outputs and beyond)
- From “counts” of programs funded or people receiving services to measures of the **effectiveness of the programs** funded and **effects on the people being served**
- From measures that promote rigid categorization to ones that **promote comprehensive, integrated, and tailored programming** and implementation
- From HIV/AIDS-specific measures exclusively to measures that **include effects on population health and systems generally**
